PROJECTS

A Federated Approach to Hate Speech Detection

Guide: [Zeera Waseem](#)

- Ongoing research project which acts as an extension to the work done by [Fortuna et al](#) in order to identify some real world representations of the types of hate speech on different non-iid datasets.
- The further work includes simulation graphical representations of the text in the datasets used in [Fortuna et al](#)
- **Collaborators:** Zeera Waseem, Deep Gandhi, Jash Mehta, Jay Gala

- Final year project which uses Federated Learning to train models on highly sensitive medical data stored on patient devices on a Blockchain network.
- Using Differential Privacy to increase collaboration of datasets among hospitals and thus, identify diseases in privacy based settings.
- Using Natural Language processing and FL to identify alternatives to various prescriptions based on medical reviews.
